

ANDREW YOUNG

andrewy445@gmail.com | 508-975-6244 | github.com/andrewd-young | linkedin.com/in/andrew-young-99b2a220b

EDUCATION

Northeastern University, Khoury College of Computer Sciences

Candidate for Bachelor of Science in Computer Science and Finance

Boston, MA

Expected August 2027

Coursework: Algorithms and Data, Computer Systems, Object-Oriented Design, Software Engineering, Databases

Activities: Phi Gamma Delta (Apparel Chair), Skateboarding Club | Study Abroad: Sydney (2025), London (2023)

EXPERIENCE

Notability

Web App Software Engineering Co-op

San Francisco, CA

Jul 2026 – Present

- Built the meetings-first home screen in React and TypeScript for the Electron desktop launch, now the landing surface for **25k+ weekly active users** and source of nearly a third of desktop note creation, covered by 80+ Vitest and React Testing Library tests.
- Shipped the paging upcoming-meetings card, folding six calendar connection states into one memoized home-modules selector over Redux slices; it drew **100k+ impressions** from 15k+ users and 1,000+ meeting notes started in its first month on desktop.
- Rebuilt the recent-notes row around last-opened rather than last-edited ordering, with one shared createSelector behind the home card row and the library list, hiding the row when empty; it drives **45k+ note opens** from roughly half of desktop note-openers.
- Replaced a persona check repeated across every study surface with one default rule inside the setting that already gated them, persisted so iOS and Android inherit it; non-students who never set the toggle lose those surfaces once, which one tap restores.
- Migrated web support from Zendesk to Intercom behind a flag with Zendesk as the rollback path; caught 3 backend blockers before launch, and web now files **400+ conversations a week** (about a quarter of in-app support), each with user ID, tier, and diagnostics.
- Set up a sign-in page A/B test swapping the static hero image for a looping product video, layering a second flag over the existing pre-auth bucketing and tagging three Mixpanel funnel events with the assigned variant to measure sign-up completion.

Strella | AI customer research platform, Series A

Software Engineer Co-op

New York, NY (Remote)

Jun 2025 – Dec 2025

- Rebuilt the video player's subtitle and playback layers, adding draggable Picture-in-Picture, VTT subtitle rendering, seek thumbnail previews with frame caching, and nested settings menus to a shared component used across web and mobile clients.
- Identified endpoints serving data with no session check during a route audit, closed them behind shared auth middleware, deleted the routes nothing called anymore, and fixed a cron job that had been failing in production.
- Built a HubSpot CRM integration end to end, moving access control from a blacklist to a whitelist model, debugging entries that failed to sync, and shipping in-app CTAs, documentation, and a demo video ahead of the production rollout.
- Audited which analytics events were still in use and which were missing, then instrumented **40+ Mixpanel events** across web, mobile, and server workflows and built 4 internal dashboards the sales, product, and customer success organizations relied on daily.
- Shipped AI-generated summaries of completed interview sessions as Slack notifications, tuning the summarization prompt and message format so the go-to-market team saw every result without opening the app or reading its transcript.

Lola Dating

Software Engineer Intern

Concord, MA

Apr 2024 – Aug 2024

- Built profile sharing end to end with a Vue.js page over a Go backend, drawing **200+ shares** in its first week on a 10k-user app.
- Worked in the Go and SQL backend, paginating the past-matches endpoint and wiring SMS opt-in through Klaviyo and Postgres.
- Expanded the internal support console with ticket categorization, market filtering, and the daily metrics the team read each morning.

SKILLS

Languages: TypeScript, JavaScript, Go, Python, Java, C, SQL, HTML/CSS

Frameworks/Libraries: React, Redux Toolkit, Next.js, Electron, Node.js, Vue.js, Prisma, GraphQL, Vitest

Tools/Platforms: Mixpanel, Storybook, React Testing Library, Vite, Git, CircleCI, PostgreSQL, Docker
